ABDULLAH MUHAMMAD JAMAL

Karachi, Pakistan (remote, flexible hours) | abdullahm.jamal234@gmail.com | linkedin.com/in/abdullahmjamal | github.com/AbdullahMJamal

PROFESSIONAL SUMMARY

AI and full-stack engineer focused on AI systems that check their own output before it reaches a business: RAG pipelines, voice agents and n8n automations with validation, review queues and human approval. Certified Ethical Hacker (CEH) with Anthropic Claude and n8n certifications. Built real-time voice/text AI with the Gemini 2.0 Multimodal Live API, launched a Stripe-connected SaaS product, and prototyped Web3 asset verification on Algorand.

TECHNICAL SKILLS

AI and agentic systems: Gemini 2.0 Multimodal Live API, LangChain, hybrid search (BM25 + ChromaDB), Cohere Rerank-v3, FAISS, reciprocal rank fusion, Vapi voice AI, Unstructured.io, OpenAI and Anthropic APIs, RAG architecture, prompt engineering, structured output validation.

Automation: n8n (workflow design, error handling, deduplication, human-in-the-loop review), Google Drive and Sheets APIs, webhooks, LlamaParse.

Full-stack and Web3: Python, TypeScript, JavaScript, FastAPI, Next.js, React, Node.js, Tailwind CSS, Supabase, SQLite, Stripe API, Algorand SDK, RWA tokenization.

Security and cloud: CEH methodologies, penetration testing (VAPT), OWASP Top 10, network security, cryptography, Azure deployment, Docker, Linux / WSL2 (Ubuntu).

PROJECTS

- **Document Data Extractor (n8n)** | Automation Engineer: Built a 27-node workflow that reads invoices of any document type from Google Drive, extracts fields with an LLM, and writes them to Google Sheets. It re-checks totals in code, blocks duplicates by vendor and invoice number, and sends anything under 0.8 confidence to a needs-review folder with a Discord alert. Open source on GitHub.
- **Lead Audit and Outreach Drafter (n8n)** | Automation Engineer: Designed a draft-only workflow that audits a business website (mobile viewport, title, meta description, contact links, PageSpeed) and drafts a fact-based outreach email. A human reviews and sends every message.
- **Settled** | Full-Stack SaaS Developer: Architected and launched a SaaS app, now in public beta, that automates late-fee collection for freelancers. Connects to Stripe, applies user-defined late-fee rules to overdue invoices and sends AI-written payment reminders. Next.js, TypeScript, Supabase, Stripe API.
- **Gemini Multimodal Live RAG** | Lead AI Engineer: Built a low-latency voice and text RAG assistant with Python, Vertex AI and the Gemini 2.0 Multimodal Live API, using streaming bidirectional audio.
- **Vapi Autonomous Voice Agent** | AI Backend Developer: Built a voice agent that books client appointments, using Vapi, Python (FastAPI) and SQLite.
- **Advanced RAG and Document Intelligence** | AI Systems Developer: Built a hybrid retrieval engine (BM25 + Chroma embeddings re-ranked with Cohere Rerank-v3), a 10-module FAISS framework with agentic chunking and RRF, and a multimodal pipeline using Unstructured.io and GPT-4o for PDF parsing.
- **Ownify** | Founder and Web3 PoC Developer: Designed a digital passport proof of concept for real-world assets on the Algorand blockchain, with cryptographic verification of asset records.

CERTIFICATIONS

- Certified Ethical Hacker (CEH)
- Anthropic Claude Certified: agentic workflows and system architecture
- Official n8n Certification: workflow orchestration
- 12-Week Algorand Pakistan Fellowship (graduate)
- IELTS, CEFR level B2

EDUCATION

BS Computer Network and Security, Sir Syed University of Engineering and Technology — Oct 2023 – Expected Aug 2027

Coursework: Information Security and Cryptography, Network Security, Operating Systems, Data Structures and Algorithms, Cloud Computing, Database Systems, Web Engineering.
